WHO WE ARE

The Information Technology Department (ITD) is the central technology support for the County's agencies and departments who serve our communities. Our more than 1.5 million residents and countless customers around the world depend on the services the County provides. ITD powers those services in ways that our tech savvy constituents have come to expect; giving them access to services when and where they need them.

We are a team of technology professionals and evangelists with a wide-range of technological skills and diverse experiences. We provide great customer service and high quality products. We are passionate about our work and we are proud of the numerous awards we have won.

We are very excited about the cultural change in our department. We are transforming the perceptions of government technology and redefining ourselves. We are "staying ahead of the wave" by fostering innovation, pushing the envelope, and taking risks. We have embraced the entrepreneurial spirit of our start-up neighbors in Silicon Valley. We are more than just technologists though. We are also passionate about our communities. We are volunteers, food drive donors, activists, and humanitarians who love the communities we work and live in.

THE IDEAL CANDIDATE

The County of Alameda seeks a progressive and innovative Chief Technology Officer (CTO) with a passion for using technology to provide vital services to the community. He/She will lead efforts to modernize and transform the County's technology and to adopt digital innovations to meet the technology challenges of the County.

The new CTO will be an exceptional leader with the opportunity to create a high performance team and change the culture from "we have always done it this way" to one of "endless possibilities."

The selected person will be politically astute and able to foster effective partnerships throughout the County and with its stakeholders.

The new CTO will drive innovation, strategy, planning, architecture, technology standards and the application of best practices. He/she will be dedicated to excellence in operations and delivery while maintaining a focus on innovation.

In addition to being a visionary, the CTO will have direct oversight of Data Center and Cloud Services that includes but not limited to Cyber Security, Networking, Operations, Radio, Infrastructure and Telecommunications.

He/She will engage in senior level business and technology discussions related to enterprise agility, cloud adoption and digital transformation.

Lastly, the ideal candidate will have excellent communication skills, the ability to evangelize modern technology, and a passion for solving hard real-world problems.

Join our team and help us make a difference in the technology industry and in our communities.
